Exercice 05 — Audit des mots de passe de la plateforme Code un max

```
Initialized device kernels and memoryStarting self-test. Please be patient...Finished self-testDictionary cache built:
* Filename..: /data/crack/dico-audit.txt
* Passwords.: 6
* Bytes.....: 59
* Keyspace..: 6
* Runtime...: 0 secs

The wordlist or mask that you are using is too small.
This means that hashcat cannot use the full parallel power of your device(s).
Unless you supply more work, your cracking speed will drop.
For tips on supplying more work, see: https://hashcat.net/faq/morework

Approaching final keyspace - workload adjusted.

```
anto@debian:~/cybersec-audit-codemax$ docker exec attaquant hashcat -m 0 -a 3 /data/crack/hash_md5_audit.txt '?l?l?l?l?l' --force
hashcat (v6.2.6) starting

You have enabled --force to bypass dangerous warnings and errors!
This can hide serious problems and should only be done when debugging.
Do not report hashcat issues encountered when using --force.

Use the "--show" option to display all of the cracked passwords reliably
Session completed
anto@debian:~/cybersec-audit-codemax$ docker exec attaquant john --show /data/crack/hash_sel_audit.txt
?:codemax123

1 password hash cracked, 0 left
anto@debian:~/cybersec-audit-codemax$
```

Correction de la commande pour ne pas prendre la cache en compte
--potfile-disable rend le run reproductible (chaque exécution refait réellement le travail) et elle te donne le panneau honnête avec Speed.#1, Status...: Exhausted, Progress...: 100%

BONUS
